Scientific Astrological Prediction of Human Life

Dr. Pijush Kanti Bhattacharjee

Abstract

Generally people think that astrology is not a scientific subject and astrological prediction of human life or anything has not been explained by logic or practical scientific experiment with natural behavior. It is assumed that it is bogus or unjustified area for approaching conclusion of any fact which causes much harm to our society. In this paper, it is proved that “astrology” is quite scientific, and human life or anything is strictly followed by mathematical pattern like sinusoidal (sine) diagram with alternately up (positive cycle or good time) and down (negative cycle or bad time) having time period nine years. Hence simple scientific method for astrological prediction of human life or anything is enlightened.

Keywords: Astrology, Veda, Planets, Palmistry, Numerology, Vastu, Horoscope or Zodiac, Ascendant or Lagna, Rashi, Stars or Nakshatras, Gana, Sinusoidal diagram, Time period.

Introduction

Now-a-days it is a burning question whether astrology has any relation with science. Most of the people are declaring astrology as an unimportant or bogus subject and not having any scientific value. They are trying to stop the study of astrology and the practice of astrologers. They say that it cannot predict correctly the future and past of a human being or any happenings. Therefore, it has no effect for any type of welfare for mankind and nature. Considering all these demands from so called scientific minded people, it is emphasized in this article whether we should stick to study astrology or not. First it is seen that the study of astrology has started from very ancient years, just when man became to be civilized like 5000 B.C. or before. In Rome and Egyptian civilization, we have the prove that the people at that time were well aware of this subject and used its well-directed path for human and nature development. They invented so many systems and branches under astrology. Subsequently when the religious leaders like Ram, Krishna, Christ, Mahabir, Buddha, Mohammad, Guru Nanak etc. have come, they also utilized the very effect of this subject for human and nature welfare. When Arians came to India and Asian countries, they brought the knowledge of astrology which was gradually spread out all over the country. In China, Russia, Europe, Australia, America and all over the world, the crude form of astrology was widely circulated under different names and patterns. Indian Saints and Acharyas were having good knowledge of astrology, and Indian oldest literature “Veda” was formed on the basis of astrological inventions and theories. Every line or sloke (consisting of two or more lines) in the Veda was constructed from the pure knowledge of natural forces, energy, solar system, controllers etc. which governs human life and nature. Those are derived from the study of astrology. Under the Rig and Atharva Veda, Ayurveda was developed. Ayurveda assures the study of diseases, surgery, trees, herbs, minerals, chemicals, bacteria, viruses, parasites etc. to treat patients and makes cure within a suitable time. Further this “Ayurveda” gives birth to our present day’s medical treatment under different categories as Ayurvedic, Allopathic, Homeopathic, Unani. Therefore, it is seen that the basic mother subject in human civilization is astrology only.

As civilization progress, astrology is divided in numerous parts and branches like natural, philosophical, physical, mathematical, chemical, biochemical, medical, radiological, psychological, engineering—civil, mechanical, electrical, electronics, communication, computer, and others etc. If we deeply think the very essence of any invention, we can find that basic idea comes from the astrological concept, for example, in Indian old mythological literature “Ramayana” it was told that Ravana’s son Indranil was fighting with Ram in the air under the sight of clouds, accordingly Wright brothers were able to invent aeroplane. Since our study becomes complex and some specific purpose oriented, we divert or divide the mother

subject astrology in several areas. Different branches of present astrology are palmistry, forehead or head or finger analysis, horoscope or zodiac, numerology, vastu and so on. Now astrologers (Jotishers) are engaging in the study of astrology for human development by application of different things like metals, stones, tree products, mantras, colours, music, songs, yoga, meditation etc. such that human's health, mind, body, spirit, senses and emotions are brought in a state of perfect balance, and it is named as 'astro-therapy'.

Horoscope Preparation and Prediction of Human Life

For predicting the human life happenings (facts) like health, mind, house, marriage etc., astrologer firstly prepares the horoscope [1, 5]. In 3000 B.C., the Greeks first defined the Zodiac ('Circle of Animals' in Greek language) as a 12 stage of lunar cycle with the sun passing through each of the 12 constellations (houses) from 0^S (zero sign) to 11^S. Actually horoscope or zodiac is the birth chart of a person on birth time at date in place which shows astronomical positions of the Sun (star) and its planets and one satellite, i.e., grahas and upa-graha in the solar system like Moon, Mercury, Mars, Jupiter, Venus, Saturn, Rahu and Ketu.

When this horoscope was invented, we did not know about Uranus, Neptune and Pluto planets in the solar system, but the astrologers felt about the other two planets which had impact on horoscope calculation. They gave name Uranus as Rahu and Neptune as Ketu, since the effect of Pluto is quite feeble; they ignored Pluto and all satellites except Moon in the solar system. Hence in the Vedic Astrology or Jyotish, planets

or grahas indicate nine members such as Sun, Moon, Mercury, Mars, Jupiter, Venus, Saturn, Rahu and Ketu.

In a horoscope or zodiac [1, 5], the house occupied by the ascendant or lagna (i.e., the position of the sun on birth time at date in place of a person) is the first house, then one has to count anticlockwise from the ascendant up to 12th house, because all the planets and satellites are rotating around the sun anticlockwise as seen from North. Initially each house is having an owner planet as shown in Fig. 1, like owner of Aries and Scorpio is Mars, owner of Taurus and Libra is Venus, owner of Gemini and Virgo is Mercury, owner of Cancer is Moon, owner of Leo is Sun, owner of Sagittarius and Pisces is Jupiter, owner of Capricorn and Aquarius is Saturn. Also 27 Stars (Nakshatras) are spread over 360⁰ in 12 houses, each star is having a span of 13⁰ (degree) 20' (minute), e.g., (i) Ashwini (from 0^S 0⁰ 0' to 0^S 13⁰ 20'), (ii) Bharani, (iii) Krittika, (iv) Rohini, (v) Mrigashirsha, (vi) Ardra, (vii) Punarvasu, (viii) Pushya, (ix) Ashlesha, (x) Magha, (xi) Purva Phalguni, (xii) Uttara Phalguni, (xiii) Hasta, (xiv) Chitra, (xv) Swati, (xvi) Vishakha, (xvii) Anuradha, (xviii) Jyeshtha, (xix) Moola, (xx) Purva Ashadha, (xxi) Uttara Ashadha, (xxii) Shrivana, (xxiii) Dhanishtha, (xxiv) Shatabhisha, (xxv) Purva Bhadrpada, (xxvi) Uttara Bhadrpada, (xxvii) Revati. The starting of any star is calculated by the formula like, (Star Number - 1) × 0^S 13⁰ 20', e.g., Uttara Phalguni starts at, (12 - 1) × 0^S 13⁰ 20' = 11 × 0^S 13⁰ 20' = 4^S 26⁰ 40', Therefore, Uttara Phalguni starts at 4^S 26⁰ 40' and ends at 5^S 10⁰; since, 30⁰ = 1^S, 1⁰ = 60', 1' = 60".

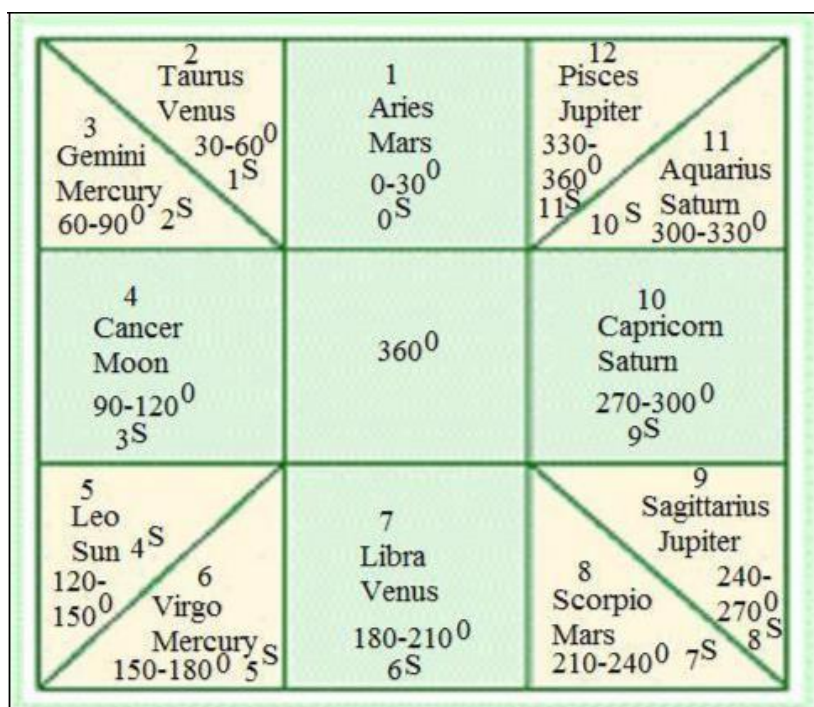

Fig 1: Horoscope or Zodiac prepared by twelve houses with the name of their house owners.

The effect of stars or nakshatras is considered in the actual position of the planets on the birth time at birth date in birth place of a person. Moon falling under the star or nakshatra determines Gana of a person and accordingly Vimsottari Dasa of the person is computed, e.g., Ashwini, Mrigashirsha, Punarvasu, Pushya, Hasta, Swati, Anuradha, Shrivana, Revati are under Dev Gana (Satvo Guna); Bharani, Rohini, Ardra, Purva Phalguni, Uttara Phalguni, Purva Ashadha, Uttara Ashadha, Purva Bhadrpada, Uttara Bhadrpada are under

Manushya (Naro) Gana (Rajo Guna); Krittika, Ashlesha, Magha, Chitra, Vishakha, Jyeshtha, Moola, Dhanishtha, Shatabhisha are under Rakshasa or Devari Gana (Tamo Guna) [1, 5].

Why the astrologer prepares horoscope? We know that any point or place in the world or universe can be divided into 360⁰ (degrees). In horoscope or zodiac, the birth place of the person having altogether 360⁰ is divided into 12 constellations or houses, each constellation or house is having

span 30^0 , since $30^0 \times 12 = 360^0$. Then the position of nine planets or grahas of the solar system is calculated by astronomical method on the birth time at date in place of the person, and those are placed in the houses as derived in sign, degree, minute, second. Thereafter, the astrologer determines the location or house occupied by the sun on the birth time considering the sun's (actually earth) daily motion, i.e., the sun rotates one complete revolution 360^0 in 24 hours (day), that means, 30^0 in two hours. The house occupied by the sun on the birth time at date in place of a person is called the Ascendant or Lagna or First House or Rising Sign of the person. For example, if date of birth of a person is 18-02-2016 on 11.45 AM in New Delhi, India, the sun's position 5.30 AM is at 10^S (Aquarius) $4^0 56' 37''$ (from Ephemeris), then on 11.45 AM the sun comes at $1^S 8^0 27' 53''$, thus the ascendant or lagna of the person is 1^S (Taurus) $8^0 27' 53''$. Moon of the person is at $2^S 11^0 56' 42''$ falling under star Ardra in 2nd house from the ascendant. The house occupied by moon is called the Rashi of the person, so the rashi of this person is Gemini. Thereafter, all nine planets on the birth time at date in place of the person identify the prediction of his/her life. In solar system, the maximum energy is supplied by the sun and the moon to the earth, so these two have a great impact on each and every particle on the earth, for that ascendant and rashi of a person are two important houses for considering astrological prediction. Generally the ascendant or lagna controls the physical health and overall appearance, whereas moon or rashi controls the mind of the person. The astrologer counts houses from the ascendant or lagna of the person in anticlockwise direction from 1st to 12th house. Each house in the horoscope of the person indicates some specific purpose like health, mind, relation with others, job, marriage etc.

First House or Ascendant (Lagna) – Health, Head, Appearance, Quality, Activity, Foreign etc.

Second House – Wealth, Face and Throat, Eyes, Speech, Near Relatives, Sale Business etc.

Third House – Brother and Sister, Chest, Servant, Travel, Play, Courage, Fight, Dress etc.

Fourth House – Mother, Heart, Mind, Education, Friend, Property, Kingdom, House, Car etc.

Fifth House – Son and Daughter, Father, Student, Belly, Love, Expectation, Intelligence etc.

Sixth House – Enemy, Disease, Anxiety, Poison, Bone, Uncle and Aunt, Brother's enmity etc.

Seventh House – Marriage, Lower Portion, Sexual Organ, Food, Promotion, Purchase etc.

Eighth House – Death, Death Place, Accident, Longevity, Long Quarrel, Wife's Property etc.

Ninth House – Luck, Religion, Travel Religious Place, Father, Teacher, Dedication, Car etc.

Tenth House – Work or Job, Respect, Power, Education, High Position, Dress, Sleep etc.

Eleventh House – Income, Property, Gain, Luck, Father-in-law or Teacher's Property etc.

Twelfth House – Expenditure, Sufferings, Long Travel, Uncle and Aunt, Jail, Attack etc.

In our vaccine invention, we see that most of the vaccines are to be introduced within a short period of birth, because the vaccines can well gather in all cells of the body. Again in a raw film, when light is exposed first time, the film catches that light as an image, further imposing light on the film has no effect. Likewise, when a person is just born, the rays come from the solar system are captured or received by the body cells, accordingly his/her psycho-somatic (mind and physique) is developed. In this case, any lack or shortage of rays having particular wavelengths give obstruction to the developments and can cause so many hazards in his/her life

like disease, less confidence, unhappiness, melancholy etc.

Finally the horoscope or zodiac of a person is analyzed by the actual position of the planets (i.e., radiation available) on the birth time at date of the person in birth place counting anticlockwise from the ascendant or lagna with the owner of the houses and stars, and the planets' relation with the ascendant. Accordingly upgrading or downgrading (scaling) the particular wavelength radiation, i.e., for changing the power of the planets, are done by different methods like suggesting to use metals, stones, tree products, mantras, colours, yoga, music, songs, and change of place etc. After implying the proper 'astro-therapy', the person is immensely feel the betterment of life, and causes physical and mental development in due time. This 'astro-therapy' is applied not only on human beings, but can be adhered to any kind of living and non living beings for smooth development and longevity. In the earth, everything is mainly controlled and governed by the radiation, i.e., energy imparted by the sun and its planets and satellites. If we able to gather full energy in the form of radiation from the solar system for any kind of things either living or non living, it gives more longevity and healthy service, e.g., life of human being, animal's life, house buildings (by vastu shastra), agricultures, manufacturing goods, applied technologies etc. It is proved that human and animal's physical with mind behavior can be changed by the application of radiation having suitable wavelengths which are available by metals, stones, tree products, mantras, colours, music, songs, yoga, change of place etc.

This preparation of horoscope for a person or thing is quite cumbersome and not so accurate due to different practical problems such as not knowing the correct date of birth with time and place, human error, incorrect planets' actual position (supplied by Ephemeris) etc. Therefore, people are not satisfying by the astrological prediction of horoscope method and sometimes they are badly affected by wrong suggested 'astro-therapy'.

Scientific Simple Method for Astrological Prediction of Human Life

The development of astrology is going through a long process and the astrologers are focusing in various areas like palmistry, body, i.e., forehead, head, foot, finger analysis, horoscope, numerology etc., but none of the methods is either accurate or simple. In this paper, a very simple and precise astrological prediction method for human life or anything is invented. It is completely based on scientific phenomenon. It is shown that every incident in human life is controlled by mathematics or logical explanation. If we guess the mathematics behind our life spanning, we can easily find the past, present and future in our life. The destiny of human life is achieved by continuing life under mathematically guided path. Therefore, life is like a river in which water (happenings) is flowing from upper to lower region and vice versa (water is vaporized going to upper region forming cloud, then falling by rains to lower region or earth).

Human life is undergoing alternately ups and downs happenings, i.e., good and bad times. In good time running of a human being, all things like health, mind, family, education, social prestige, marriage, service or job, business, promotion, property etc. will be upgraded or uplifted, whereas in bad time, all things will decline. It is quite necessary that in good time one has to speed up, i.e., doing more work, risk, prompt decision etc., and in bad time one has to slow down, i.e., less work, no risk, careful decision etc. The period of good time is the same as that of bad time; mathematically it is like an alternating current or sinusoidal signal type. The total time period (T) consisting of one good time or positive cycle and

one bad time or negative cycle is nine (9) years, because nine planets control all things in the earth. Therefore, half time period (T/2) [either for good time or bad time] is 9/2 years, i.e., 4.5 years or 54 months. This one half time period for good time or bad time is divided into six parts, in which one part is having duration 54/6 months or 9 months, as shown by colour in Fig. 2. This small duration nine (9) months shown by a particular colour in Fig. 2 identifies that one person is spending almost same and certain condition or state in this nine months duration.

The life of a person is undergoing sinusoidal diagram (curve) such as for good time or positive (+) cycle, starting from zero,

gradually rising to the highest position (positive peak), then turning down (less good) to reach zero state; thereafter starting bad time or negative (-) cycle, gradually falling to maximum negative value (negative peak) as same value of positive peak, then increasing (less bad) value to reach zero, and vice versa. The highest amplitude (peak) of the bad time or negative cycle is same as that of the good time or positive cycle, but this highest amplitude or peak value may change to next time period (T). It means that time period (or frequency) of the human life cycle is constant, i.e., 9 years or 108 months, but highest amplitude may vary one period to another period which is clearly delineated in Fig. 3.

Fig 2: Human life one Time Period (T) having one good time or positive cycle and one bad time or negative cycle.

Fig 3: Human life cycle having different time periods, each time period (T) with good time or positive cycle and bad time or negative cycle.

This colouring of a time period (T or 9 years) spent by a human being as shown in Fig. 2 are done in a meaningful way, i.e., Blue is for hard work, study, education, dedication, sorrow overcoming, high intelligence etc.;

Red and Brown are for achievement, energy, success, respect, power, authority, top position, good health and mind, peaceful, happiness and so on;

Yellow is for enjoyment, leisure, sex, unhappiness, fall, poverty, sorrow etc.;

Green is for fighting, creation, education, innovation, spirit, friend, relation, path, heaven etc.

Simply it is told that a person is undergone good time (positive cycle) duration 4.5 years and bad time (negative cycle) having span 4.5 years alternately in a nine years time period (T), but the maximum amount of the good happenings are equally same as that of the bad happenings, this maximum amount can change for the next time period.

This is the practical example of sinusoidal electric current signals passing through a resistive conductor. Therefore, same types of happenings or facts are repeated after 9 years in a human life. After born, a person remains first half period (0 to 4.5 years) either good time (positive cycle) or bad time (negative cycle), and it is confirmed by his/her past happenings or after first time period.

Example-1. A person having age 29 years 5 months wants to know about his/her life prediction (happenings or foretell).

Answer. Since he/she crosses 18–27 years (multiple of 9 years), the astrologer asks him/her to compare 18 years to 22.5 years with 22.5 years to 27 years (which was known to him/her) and which period was good? If he/she answers that 22.5 years to 27 years was good, then the astrologer plots this period under positive cycle or good time (positive peak 24.75 years), and obviously 18 years to 22.5 years is under negative cycle or bad time (negative peak 20.25 years), and

accordingly all life time is set under sinusoidal diagram bearing time period nine years, i.e., 27 years – 31.5 years will run under bad time, 31.5 years – 36 years go under good time and so on. Then the astrologer can easily forecast his/her life happenings correctly in a swift time.

Conclusion

The study of astrology is not yet started in full swing all over the world. It is not taught in the recognized institute at government level. There are no specific course materials and guidelines available for this subject. Only few people learn this subject at their own will. There is no laboratory where the astrological concepts and theories can be tested, and further developed with modern scientific method. Present astrological predictions are superficial and not scientific. Therefore, scientific astrological prediction for human life or anything (living or non living thing) is explored which computes very accurate result within a twinkle of time by asking a single past question to the person or about thing. Thus human kind can enjoy life in a natural beautiful way with knowing the full life prediction by this noble scientific method.
