## How pandemics happen and an astrological analysis of COVID 19

**Sandeep Gupta**

### Abstract

The pandemics are large scale outbreaks of infectious disease that can cause a great level of morbidity and mortality over a large geographical area causing a significant social, economic and political disruption. The scientists say that the likelihood of pandemics has in the last few decades increased because of greater integration of economy, travel, urbanization and over exploitation of natural resources. So a great deal of policy attention and resources are required to limit emerging outbreaks that might lead to pandemics.

As per W.H.O there were six recorded instances of pandemics during the period starting from 1900 to till date.

In this study I tried to find out

1. When pandemic happens? Are there some special astrological alignments of planets that cause this pandemic?
2. Why Covid-19 happened and when it is likely to end?.

**Keywords:** Pandemics, Covid-19, Ra-Ke axis, solar eclipse

### Introduction

This study focuses on pandemics of virus or bacterial diseases. First of all, there must be certain astrological parameters or combinations required for the occurrence of a pandemic.

Also, all of these defined parameters must be logically connected and must be replicated every time (or at least 75-80% time) whenever the event of similar nature occurs. Otherwise we cannot make any logical prediction and cannot call it scientific.

So, as we know in astrology

1. Saturn means disease in masses.
2. Rahu & Ketu represents virus and bacteria.
3. Sun is the giver of life on earth or destroyer of virus or bacteria.
4. Jupiter means expansion or spread

Based on above facts let us make certain assumptions. These assumptions will be kept constant while analysing each & every case.

### Assumptions

- 1) When Saturn comes on Ra-Ke axis. Virus or bacterial disease will be there in the masses. It happens approx. once in every 5.5 - 06 years. It can be endemic/epidemic (local or region specific) or pandemic (globally).
- 2) This disease will be manifested or initiated in the masses once annular or total solar eclipse (not partial) is there because at that time Sun rays are blocked & do not reach on the earth & this is the time the virus & bacteria are most active.
- 3) i) Now along with Saturn, if Jupiter is also on Ra-Ke axis or in mutual aspect at this time the disease will spread globally and will become pandemic.  
ii) Even if Saturn left the Ra-Ke axis before the Jupiter joins the axis, the disease can still become pandemic if Jupiter joins within 6-7 months of annular or total solar eclipse which happens immediately after Saturn departure from the axis.
- 4) The max. Intensity of pandemic will last for approx. 15 months from the solar eclipse after which the pandemic started and covering next two successive solar eclipses.

- 5) The disease will continue to spread till Jupiter is with Ra-Ke axis or Saturn.  
This is relevant for global level. For a particular country the relevant horoscope also comes into consideration

### Materials & Methods

Now based on information given above let us analyse the few transits during the following

1. SARS
2. Swine Flu
3. Covid-19

Date of Sa Joining Ra-Ke axis	Date of Sa leaving R-K Axis	Date of Jupiter Joining R-K axis(rashi)	Date of Jupiter leaving R-K axis	Sa/Ju mutual aspect/ conj	Disease	Year	Relevant Eclipse (Rashi)
29/02/2002,09/02/2003 (2 Sa-R/8Ke) axis	23/07/2002,07/04/2003	23/02/2005 (6)	28/09/2005	N.A	SARS	2002-03	26/12/2002(8) 23/11/2003(7)
15/07/2007 (5 K-Sa/11 R) axis	06/05/2008	10/12/2008, 01/08/2009 (10)	01/05/2009,04/11/2009	02/05/2009 to 31/07/2009	Swine Flu	2009-10	26/01/2009(10)
24/03/2019 (3 R/9 K-Sa) axis	24/01/2020	28/03/2019(9),05/11/2019(9),01/07/2020 (9)	25/04/2019,31/03/2020,21/09/2020	01/04/2020 to 30/06/2020	Covid-19	2019-20 onwards	26/12/2019(9)
				20/11/2020 to 06/04/2021 & 14/09/2021 to 20/11/2021			

- 1) In case of SARS the disease started around Nov 2002 very close to relevant eclipse and almost ended on June 2003. The Saturn left the axis on 07/04/2003. The immediate relevant eclipse was on 23/11/2003. Jupiter joined the axis after approx. 15 months after this eclipse so disease did not spread globally.
- 2) In case of Swine Flu also, the Saturn left the axis before Ju joined the axis but Jupiter joined the axis almost within 4 months of relevant eclipse after Saturn departure from the axis. So Jupiter spread the disease globally. Swine Flu started in early 2009 and ended around April 2010.
- 3) In case of Covid-19 the Jupiter and Saturn were together first from 28/03/2019 to 25/04/2019 in Dhanu (Sagittarius).

Then again from 05/11/2019 to 24/01/2020 in Dhanu. So, on 26/12/2019 when annular solar eclipse happened in Dhanu they were together (clear case of pandemic).

Saturn moved away from Ra-Ke on 24/01/2020 but Jupiter was still on Ra-Ke axis. Exited on 31/03/2020 but joined Saturn in Makar (Capricorn) to continue spreading the disease. Jupiter will again join Ra-Ke axis on 01/07/2020 in retrograde motion just nine days after another annular eclipse on 21/06/2020 so possibility of disease spreading further. On 21/09/2020 Ra-Ke axis will move away from current position. At that time there may be small respite but Jupiter again joins Saturn in Makar (Capricorn) on 20/11/2020 till 06/04/2021 and there is a total solar eclipse on 14/12/2020. So, things will again aggravate after that and more so because Mars joins Ra-Ke axis in Feb 2021 to April 2021.

### Results & Discussions

I have studied all the pandemics (as declared by W.H.O) from 1900 to till date.

- 1) Spanish flu (1918)
- 2) Asian flu (1957-58)
- 3) Cholera Pandemic (1961 starting)
- 4) Hongkong flu (1967-68)

- 5) Swine flu (2009-10)
- 6) Covid 19 (2019- ongoing)

I found that during all these pandemics the assumptions made are validated.

I also studied some cases like “SARS” where disease remained localized or region specific and found that the assumptions made were not validated in those cases.

This study definitely provides a clue about the likelihood of conversion of an epidemic/endemic into a pandemic with an accuracy of more than 80-85%.

### **Conclusions**

1. The disease during or immediately after the transit of Saturn on the Ra-Ke axis will become pandemic, only if combine conditions of Solar eclipse and Jupiter transit fulfils.
2. Regarding Covid -19, we can conclude that only by March-April 2021 we can say that worst is over & we can see significant change in situation. But maybe by that time we will become more accustomed to the situation.

This analysis is based on astrological principles coupled with logical analysis of past events of similar nature.
