Introduction

Astrology is the observation of the interplay between the planets and our Earth. (Astrologers call the Sun and the Moon planets for the sake of convenience, although they are actually luminaries. From this point forward, “planets” refers to the planets and the sun & moon). Through thousands of years of observation, two things have been noted:

Each planet represents an energetic part of our being, or a component of life (i.e. emotions, communication style, and love style).

The position of each planet in the heavens indicates the style in which the planet's component is manifested.

Natal astrology observes that the positions of the planets at the moment of your birth indicate the style in which each planet's component is manifested in your life.

Basic astrology takes four things into account

The planets (including the Sun and the Moon)

The zodiac signs which the planets are in

The Houses

Aspects

From our view on Earth, the planets, sun, and moon appear to orbit around us along an apparent path near the ecliptic. (A geocentric view is effective in astrology because we study the interaction between the rest of the universe and us here on Earth.) As they orbit, they travel through the 12 zodiac signs. Most of you know the sign in which the sun is at any given time – Aries from the end of March through most of April, then Taurus, then Gemini, etc. The sun takes one month to travel through each sign, and circles the entire zodiac in one year. As a matter of fact, that is where our concept of "year" comes from. The moon travels the entire zodiac in one month. In fact, our word "month" comes from "moon." Our entire concept of time came about because of the solar and lunar cycles around the zodiac.
